Art Unit: 1761

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yee et al (US Patent No. 5750177) for the reasons set forth in rejecting the claims in the last Office action.

Yee et al disclose a cheese containing added whey having a melting temperature of less than 200°F (see entire document, especially claims 10 and 12).

The claims differ as to the specific ratio of casein to whey.

Yee et al also teach the adjustment of the casein to whey ratio and specifically teach a ratio of at least 1:4 (whey to casein).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to adjust the whey to casein ratio as taught by Yee et al and as is claimed because the manipulation of the casein to whey ratio is well-known in the art. In the absence of a showing to the contrary Applicant is using known components to obtain no more than expected results.

Applicant's arguments filed December 27, 2005 and November 14, 2005 have been fully considered but they are not persuasive.

Art Unit: 1761

Applicant argues that the Yee et al does not teach the claimed protein ratio.

Yee et al clearly teach the adjustment of the whey to casein ratio (including 1:16, 1:8, and 1:4) and Yee et al specifically teaches making a cheese with a higher level of whey proteins than in conventional cheese (see column 5, lines 14-45).

Applicant argues that Yee et al teaches a ratio of casein to protein that does not change during ultrafiltration. It is noted that Yee et al clearly teach ratios of casein to protein that are different (i.e. 1:16, 1:8, and 1:4) and that neither Yee et al nor the claimed invention are specifically directed to ultrafiltration.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
